

PUBLIC NOTICE: Fiscalisation Data Management System

In an effort to reduce the compliance costs and to enhance operational efficiency, the Zimbabwe Revenue Authority (ZIMRA) is set to introduce the Fiscalisation Data Management System (FDMS). The introduction of FDMS is aimed at eliminating the challenges being experienced by the current system. These challenges include;

- ✚ Non-standardization of Fiscal devices that were being supplied by Approved Suppliers.
- ✚ System inaccessibility by all stakeholders

What is FDMS?

- ✚ FDMS is an integrated fiscalisation back-end solution that is focused on interfacing with most of the existing and installed hardware fiscal devices at taxpayers' points of sale while introducing virtual fiscalisation solutions to harness opportunities presented by digitalisation, offering self-service facilities to both Taxpayers, Approved Suppliers and Manufacturers of fiscal devices, thereby improving ZIMRA Service Delivery.

What are the functions of FDMS?

- ✚ Fiscal tax invoice generation
- ✚ Credit note or Debit note generation
- ✚ Z report generation
- ✚ Tracking and checking of fiscal device upon purchase
- ✚ Registering fiscal devices
- ✚ Online Error reporting and acquittal
- ✚ Online device monitoring.

Benefits of FDMS

- ✚ Taxpayer login portal
- ✚ Allows for invoice validation- confirmation of genuine invoice through self-service login into FDMS and scanning of QR codes to prevent fraud.
- ✚ Allows for the issuance of Credit notes and Debit notes- assisting taxpayers in amending errors made on invoices.
- ✚ Convenience and low compliance costs through the use of the mobile Android App and Microsoft windows App.
- ✚ Instant API gateway communication.
- ✚ Convenient device error reporting and resolution.
- ✚ Quick registration and interfacing of fiscal devices.
- ✚ VAT Input tax schedule will be system generated
